

One Colour to Rule them All!!!

- The "Static Colour" Page

Once you're into the app itself, the first page is called **"Static Colour"**

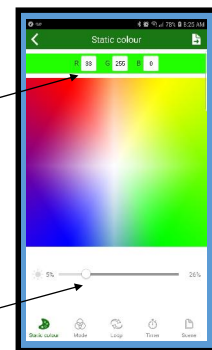

(See the bottom left of the screen for the **"Static Colour"** icon)

Just by touching your finger to the **"Digital Colour Palette"** on this page, you can choose the "Static" colour you want all the lights to display on your home.

If you want a very specific colour... click on the numbers above the colour palette itself (showing the values of the Red, Green & Blue saturation numbers) you can adjust each number for Green & Blue & Red saturation to get the exact colour you're looking for.

Now that you have the colour you want, you can adjust the **brightness** to a level pleasing to your eye.

And finally... how do you save this colour you've made as one of your favorites?

At the top right corner is your **"Scene Save"** icon. Press it and then select one of the **"Scene"** tiles and then press **"Okay"**.

Now your colour is saved for easy retrieval, in the **"Scene"** menu.
