

If not Now... When?

- The "Timer" Page

To the right of to the **"Loop"** icon at the bottom of the page, is the **"Timer"** icon.

The built in **"Timer"** function turns your lights "On" & "Off" at your desired times and on the desired days.

You can set multiple timers. (One for the weekend and one for the weekdays for example).

"Week" actually means **"Days of the Week"**.
They're numbered **"1"** for Monday to **"7"** for Sunday.

"Time" is the on and off time for the lights
(this system uses a **24-hour** clock)

"Event" is the Mode, Loop or Scene that is displayed when the timer is activated. (displayed in the Grey for each timer)

To edit the **"Week"** & **"Time"** settings for each timer just click the screen **above** the Grey "Event" Bar.

Now just choose your "Start Time" and "End Time" and the days of the week that you want the timer to be active.

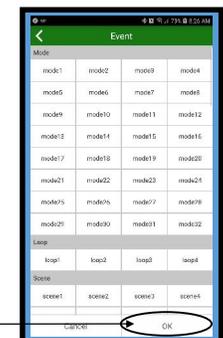

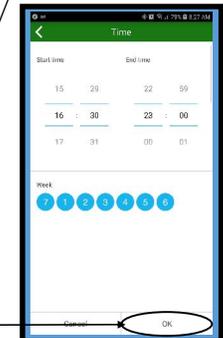

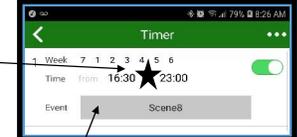

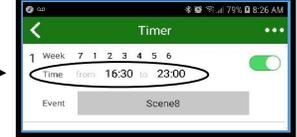

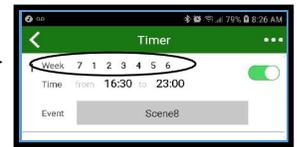

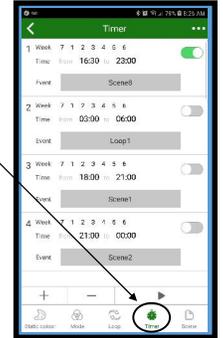

(**Note:** active days of the week are displayed in "Blue" and inactive days of the week are displayed in "Grey".)

Then press Okay to return to the **"Timer"** page.

To edit the **"Event"** settings for each timer just click the Grey "Event" Bar.

Now just choose your "Mode", "Loop" or "Scene" that is to be displayed when the timer is activated.

Then press Okay to return to the **"Timer"** page.

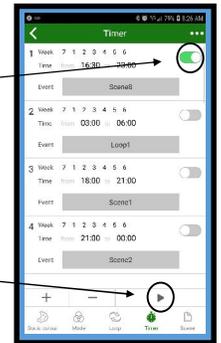

If not Now... When? - The "Timer" Page

And finally... How do you turn this **"Timer"** thing on?

On the top right corner of each **"Timer"** is an **"Active"** button that must be switched to **"Green"** for the Timer to work.

IMPORTANT: In order for the Timer you've setup to actually work, you have to push the **"Run"** button at the bottom of the Timer page. (It looks like a **"Play"** button on your old cassette player.)

Once you hit that **"Run"** button the timer is in charge of turning your lights on and off. BUT, if you do anything else in the app it will assume you're playing around & it won't Run the Timer.

Pressing that **"Run"** button is the last thing I do before closing the App.
